

FULL STACK DEVELOPER

Office location – Angel, London. Can also work from home part-time.

Benefits: Pension, Healthcare, Competitive salary, Flexible working hours, 28 days holiday, Equity in the company (EMI), Join a team of clever people doing something worthwhile

This is a great opportunity to join a technology first startup with a big focus on Natural Language Processing. We're developing our own active learning algorithms and IP and building them into Enterprise SaaS solutions. We're looking for someone special to join our small but ambitious team.

Why you should join us

Our Beta product has attracted high profile investors and we're currently trialing with some large FTSE 100 companies, so there's a good chance of success.

We're funded by some successful UK tech entrepreneurs, and have a strong board of techy ex-bluechip VP's. Which means there are plenty of experienced and knowledgeable people involved.

Our core technology is patent pending, this is a marketable piece of technology that sets us apart from the competition.

We've won numerous grants from Innovate UK, and most recently won a place with Go-To-Grow to take our product to the US.

Who should apply?

A talented full stack developer, with a minimum of 3 years experience working with AWS and Python.

Someone who likes a challenge and isn't afraid of risk. Can see the potential for the technology we've built, and is motivated by owning equity in the company in which they work.

What the job entails

You'll have complete freedom to act in a way that you believe is best for the company. You'll have a genuine say in the way the business is run, and the environment in which you work. You'll be encouraged to identify problems and solve them; and to seek out new opportunities and pursue them

Your work will focus on maintaining our BI platform, building and deploying new features, and working on 3rd party integrations. You must be a confident individual and experienced working in an agile team.

- Work with NLP and ML team to deploy algorithms into main product
- Manage API infrastructure within AWS
- Write reusable, clean code with performance and simplicity in mind
- Some Javascript work for our NodeJS and React platform
- Test creation & completion
- Code review
- Assist in architectural decisions
- Give input for product development
